

# **Libertà, scienza e diritto nell'era della genetica**

SILVIA SALARDI

*Abstract:* In this paper I deal with some philosophical-legal issues arisen during the roundtable discussion on my book *Genetic testing between determinism and freedom*. In my responses to the colleagues Maurizio Balistreri, Isabella Merzagora Betsos, Elisa Stefanini, and Antonella Piga I discuss the philosophical approach termed compatibilism, how to combine freedom and scientific advances, the relationship between the selfdetermination principle and the principle of solidarity, as well as the adequate information to donors concerning incidental findings.

*Keywords:* Compatibilism, Freedom, Self-determination, Solidarity, Genetics.
