

Etica, natura e artificio

PIERGIORGIO DONATELLI

Ethics, Nature, and Artifice

Abstract: The article suggests considering the GMOs issue from a perspective which takes into account the manifold relations among human beings, societies, and organisms. The contrast between mere nature and artificial fabrication is unhelpful: interventions on nature (also of a genetic kind) are better conceived of as ways of working in collaboration with nature in sustaining a biological and social form of life.

Keywords: Nature, Artifice, Forms of life, GMO.
