ANDREA ROSSETTI

The Natively Automated Agents

Abstract: In this paper we show, by referring to the truism of Herbert Hart's natural law, how modern law was not conceived taking into account non-human agents capable of performing actions that can have legal effects. In particular, the algorithmic reduction generates problems due to the intrinsic ambiguity of the idea of "algorithm" often used to justify non-arguable decisions.

Keywords: Algorithm, Natively automated agents, Algorithmic responsibility.
