On Bobbio's Ethical Anti-Foundationalism. Rereading L'età dei diritti

Abstract: The paper aims to analyse, also in the light of a few categories of ancient scepticism, some arguments put forward in Norberto Bobbio's book *L'età dei diritti* in favour of ethical relativism. I qualify three of these arguments as proheretic and two arguments as theoretical. Within the discussion of the first theoretical argument, I distinguish between *a priori* arguments from disagreement and *a posteriori* arguments from disagreement; within the discussion of the second theoretical argument, I distinguish between two meanings of *absolute ethical foundation*.

Keywords: Disagreement, Ethical anti-foundationalism, Ethical rationalism, Norberto Bobbio.
